America.

Joie, that is this a real, I mean this is a real depiction based on what NASA picked up by your terra satellite, right? in realtime That is correct.

Joie over what amount of time does it take, though?

What we are seeing, these are date that we are -- were taken between march and december of last year. We put them together to make a coherent story

Joie gotcha

About 5beck -- degree by 5 degree resolution you can't see smaut -- smallest features there what you see fires in west of a aka major sources you can see, that gets caught in tropical east ecleys carried across Atlantic to South America

Joie red spots we've got questions for you, in our live web chat underway on web right now,

I think the correction probably has to come from us By that I mean the peoples of the world. I think we are going to have to negotiate with each other, to clean up each of us clean up the sources, because it we are in a global one world, and what's emitted in asia comes to us, while e-night goes to europe.

Joie relatively quickly that another question from our web chat john this is from josh. how does industrial pollution come tear to natural pollution like forest fires good point do they move as quickly are they as severe?

Industrial pollution, is about is about half of that he total amount of compared to natural sources. Industrial is half or more. From that And by a industrial, I ym am including manmade sources such as the fires that are especially tropics, to clear forest for agriculture.

We've got another live chat question from the web.

I don't know the answer to that question Joie can you balance it. I mean proportion easterly

We produce a considerable amount of pollution, I don't have those figures at my fingertips

Joie you would say we are at high end of it I mean are we -- are we one of the world's great polluters or are other nations

Sorry I can't hear I can't hear

Okay, unfortunately we appear to be having problems with our line to john gillee we appreciate him joining us with insight on that And now let's take a look at the

SEE AN ANIMATION THAT SHOWS where the world's air pollution is moving at today's first hot site, provided by NASA. You can get to that site by going to our site, at [cnn.com/newssite](http://cnn.com/newssite). Then click on the hot sites button.

**PRESIDENT BUSH CONTINUING** his visit to California, defended his environmental record today Using the ancient trees of Sequoia National Park as a backdrop, the President promised to protect what he called "these works of god" for the ages. He announced measures aimed at preserving all of America's National Parks. President Bush today we must seek best ways to achieve the common-goal leading to posterity a nation of fresh air, clean water and natural beauty These policies arise from conviction a healthy environment is a national concern, and requires an active national government.

Joie: critics blasted Mr Bush's national energy strategy in large part because of focus on developing new oil sources and more coal and nuclear power, as well

**OFFICIALS IN CALIFORNIA ARE** hoping a new power-generating plant will help ease some of the power problems in the southern part of the state. The new plant is being pressed into service one year ahead of schedule. CNN national correspondent Frank Buckley joins us from Hemet in Riverside County, California, with more on the story Frank, I wonder if you hear me sounds noisy in there.

It is very noisy In here, this is the sound of electricity being generated, at the water pumping station normally this is an area used for pumping water, today, four of the pumps have been converted into turbines to help genrit electmctly let me show you exactly how that is being done if you go outside we can show you Diamond Valley Lake that is a manmade lake, 800,000 scare feet acre'of water that water, usually is pumped to that location, from the Colorado River aqueduct, that is how the water gets to this location, here. That water is usually pumped into the lake, and then that water is stored for future use. The process is being reversed today, the water coming back down from the reservoir, through these pumps which have been converted into turbines, and as that water passes through those turbines electricity is being generated let me step outside. here now and show you where that water ends up as it passes through and underneath where we were just standing it comes outside here, into this holding area this reservoir, and from here, the water goes into the San Diego canal and goes on to some of the customers in Southern California who use it This is Phil Pace the chairman of the Metropolitan Water District Mr. Pace Tell us being generate herd at this pumping station

Our initial program right now, that returned -- turned on four pumps converted generate 13 megawatts of power which is translates to enough power to accommodate 13,000 homes for one year. And that is what the initial program is

**Release**

What they're trying to do  
Yeah. Feng Shui  
In some ways. ①  
Oh, it's such an immature deal that a lot will seem incomplete probably.  
There seems to be a lot of Feng Shui experts  
Yeah. Yeah. Um-hum. ②  
You find them in a lot of places like TV  
My wife has this little book that she got that's called Wrong Shui.  
Wrong Shui.  
③ It talks all about really bad ways that reach in your home  
That's great.  
So three of us are going to Japan this week and Friday. You, you and me  
Yeah.  
So I think all of our arrangements are set. ④  
The only thing kind of open now is how we get back to the airport on the following Thursday.  
Right.  
And arrangements for getting to the meeting on Thursday morning, but otherwise we will be staying in the same hotel we usually do. And Monday morning we go to Chukan for set up, and we'll want to get there pretty well. ⑤ It's three stops down the subway line. If we get off and kind of wander around through that neighborhood and eventually end up in the right place and do that a couple of days.  
We'll do the demos. ⑥  
A couple of days of demos and then Thursday morning and then we're back home after that. So it should be a nice trip. Okay. So overall, all the times that we've been to Japan, that's always been kind of interesting to see. ⑦ you know, sort of the culture and the folks there and, you know, get to know some people inside the company which is always useful. But sometimes it's, of course, different when you go to a different place. ⑧ And one of the things that is kind of hot or at least might be useful to learn about are different gestures that people make.  
Yeah.  
And I know there are some kind of culturally specific gestures that Japanese people use sometimes so before we go this time I thought I would ask Derek, given your experience, ⑨ having lived in Japan and so on if there's something that you think might be useful or interesting for us to learn about. How Japanese people express themselves.  
⑩ Well, I can think of a few gestures that they do use that you may have seen before that are fairly important. So this one is a big one.

**Leck**

(会議前の雑談)  
彼らは何をしようとしているの？  
「風水」らしいよ。  
どうにか、こうにかね。 ①  
えー。でも風水ってトナにやっても、結局不吉でかぶる意味ないじゃないの？  
それは彼らは結構な専門家みたいよ。  
へー。そうなんだ。 ②  
テレビでも最近よくやってるよね。  
そういえば、うちの奥さんが面白い本を持ってて、タイトルが「逆風水」。  
「逆風水」？  
③ 中身は全部「この配置はもう最悪！」という内容なんがって。  
それは、おもしろいね。  
(会議本題開始)  
さー、今金曜日から日本出張だね。  
あなと 君と私の3人で。  
はい。  
出張の千紀も、もう調整済みだけど。 ④  
後は東通本郷口の駅りの空通までの道のりをどうするかだけかな。  
そうだね。  
それと来週の本郷口の午前中はミーティングの予定だし、それ以外は、前回と同じように出発までは同じホテル待機でいいかな。 それで来週曜日の朝から中野にマンのサットアップに行くけれど、中野までは電車で行けるよね。 ⑤ 地下鉄で3つ目の駅まで行って、その駅を降りてからは、ぶらぶら歩きながら近所の住宅地を巡り回っていくと、いつの間にかちゃんと着くところだったね、3日間でさ。通う予定で。  
我々はそこで中を歩いたよ。 ⑥  
お解り。 ⑦ 日中は中野で、さし、本郷までの列車にミーティングして、それで帰ってくる予定で。良い出張になると思います。それに駅付近を歩いて、毎朝日本へ行くたびに、いつも色々な面白い発見もあるしね。 ⑧ 例えばカルチャーの相違や、そこにいる人々に対する発見。またリサーチ内の人々と交流を深めることは、いつも非常に有益なことだね。もちろん、行く場所が異なれば、また違った発見もあるしね。 ⑨ それからも一つ、興味深く、少なくとも覚えておくべき事の一つに、ジェスチャーの意の違ひがあるよね。  
その通り。  
中には日本人の文化圏内でも違うような特別なジェスチャーも彼らは使っているんだよね。これはもう、今度の出張に行く前に Derek に日本での経験をお聞かせしてもらわなくちゃ。 ⑩  
例えば日本で生活を通じて、Derek 自身が感じた、さつと我々が知っておいた方がいいなと思ふものがある。是非、日本人が自分を表現するときの表現とか。  
⑪ そうだね。いくつか今回我々も目にしそうなかなり重要なジェスチャーは色々と思ふから、例えば「ねえんか、重要だね」。

presentation

How would you grab the video though? I mean

That's a good point

Would you do it on the PC? I mean, would you have to -- I mean, if you want it to be appliance-like, you want it to -- you don't want the other person -- the person who comes in here and plugs their laptop into our display to know I mean, it shouldn't have to configure anything special

Or install anything

Or install any software on their PC

And no hooking up microphones and stuff so

It seems a projector is already under your control you have a good opportunity to grab the data right at that point. So one thing to do is to grab the video stream, stuff it into a file and then pick file or something. I mean that's one possible way to solve the problem, but then you need to capture audio to go along with it to make it more lively. You know what, it's just like everything else, it's the storage requirement is the thing that will kill you

Yeah, it's a long video.

Video stream is what? It runs what, a gigabyte per hour, two gigabytes per hour?

Yeah, two gig per hour for MPEG2. But with presentation most of it will be the same so you can just grab the relevant frame bar for the slide. So you don't need a full video

That's true

To just look at the (inaudible)

Right

And every time it's different you capture --

That's a great idea. That's wonderful. And that way you wouldn't have to save the whole video, just the frames when they change. I'll bet you that would save a lot of storage space

So how would you put it all together, I mean if you have the audio and you have these frames, how do you synchronize them; because you want to have presumably an easy way to play it all back, right?

Yeah, exactly

And MPEG -- at the moment MPEG doesn't provide for that, the current MPEG 1 and 2.

Yeah, it's just a mess of frames together with an audio track

So that's some sort of mixed file

Well, with every frame you grab you get a time stamp, and then you can generate a smil file, which those time stamps --

What's a SMIL file?

A SMIL file is a -- it's something that RealPlayer supports so you'll be able to play by the audio track synchronized with time stamped images

That's our way of associating metadata with video is with SMIL?

Yes

Very interesting. Then it would be just like a slide show, wouldn't it?

Yeah. Yeah

Just have individual frames appearing in time when they originally appeared.

It would just look like a video

That's great.

That would be very nice

I bet that would save a ton of storage space

And then if you have a SMIL format set up, I bet you could even stream that presentation, couldn't you? You could probably set it up so you could have in an office a central server that captures all your presentations and then makes them available later for retrieval on the web

That would be great.

Yeah. You definitely want to be able to do that.

Yeah. And actually if the original slides are taken from PowerPoint presentation then the text probably appears very sharp in the image, and I bet you could do that pretty well

Yeah

And then index that for retrieval with a full text search engine and then the presentation would become a document inside the eCabinet

Yeah.

That's a great job.

It creates time stamps too. I mean the white board captures stuff that you've done. You keep time stamps?

Yes. (Inaudible) time stamps.

So again, you can synchronize this with white board data and stuff so this is perfect for the movie tool

That's wonderful, yeah.

I mean, if we have these resources. These are the kinds of things I want to put together visually

I bet then in the movie tool you could show white board being replayed at the same time then as the presentation was being captured.

I think that's the goal.

The video in the meeting, yeah, it would be great. Excellent idea. Okay, I think we just created the concept for a new appliance

What are we going to call it?

The presentation recorder appliance, of course.

That's a good idea. Good enough name. So anyway that's pretty much it. I mean, things I'm working on.

Okay. That sounds real good

Well, right before going to CHI I went down to Cupertino and handed off the prototype of the other Outlook Bar for the eCabinet, and they were going to take it from there so I haven't heard from them at all this week although I did send them an email just to check how things were going. But I --

Did they respond?

the majority of people here who are negative 36% of sexually active adults are HIV-positive. For the population as a whole, the number is about 20%

We want to keep the 80% of the general population who's HIV-negative, we want to keep them that way. The key is knowing your status.

Reporter: to that end, rapid testing centers like this one are being set up around the country. Young health workers are also going out into the country to urge people to get tested under a program called "total community mobilization." The goal is to reach every household in Botswana. The man who was the main target of this visit had already been tested. He politely answered questions about whether he understands the dangers of aids, and then left to take his cattle to water. He told us he knows aids, and is using a condom when he has sex, but his friends aren't.

Reporter: the government is also actively working to stop the transmission of the virus from mother to child, which happens in the uterus, at birth, or while nursing.

Well, approximately 60,000 deliveries occur each year. Of those, 40% of those women are HIV-positive, so we have 24,000 HIV-positive women delivering a baby each year. The risk of transmission from mother to baby is around 40%, so that gives us 9,600 babies who are born each year with HIV infection.

Reporter: the main public hospital in Francistown has been providing an anti-transmission drug-- retrovir or AZT-- as part of a pilot program for the past two years. Botswana got the drug cheaply with help from the manufacturer, Glaxo Smith Kline, and UNICEF. Leroe Madhani is the doctor in charge of the Natalal mother-to-child program. So when is your plan to have it available to mothers through the whole country?

We are working on a target of december 2001, and so far, we have covered seven districts out of 24 health districts, so we still have a long way to go.

Reporter: he said they also have a long way to go in getting women to agree to be tested. Did you decide to get tested for HIV/AIDS?

No, I didn't.

Reporter: why not?

I don't want to frustrate myself.

Reporter: you'd rather not know?

Yes.

Reporter: why?

If I know, I can kill myself, so I don't want to know.

Reporter: so even though it's possible that by not knowing, you're transmitting it to the baby, you still don't want to know?

No, I don't want.

Reporter: nearly all the women in the prenatal ward-- who asked us not to show their faces-- also refused to be tested. They said if a mother has HIV, a doctor will tell her not to breast-feed. Then families and neighbors will know she tested positive, and because HIV is stigmatized here, she could be rejected. To deal with these concerns, the government announced late last month that it will give an anti-transmission drug to all women to want it at the time they give birth, whether or not they've been tested. This means some women who don't have the disease may end up taking the drug, but the consensus was that the risks a outweighed by the benefits. But these mothers raised still another concern. The drug is to save the baby, not the mother.

It doesn't make much sense to save the baby and let the parents die.

Reporter: Patricia Bakwinya runs a volunteer organization that works with children of AIDS victims.

We used to depend on extended families, but now the extended families are overextended themselves. Some of the people, the relatives who are left with the children, are dying themselves. And finally, the whole family gets wiped out.

(Singing) 910

Reporter: these are some of those children. They sing, "my mother died before I could know her. My mother died before I could even see her face."

(Singing) 910

The kids are part of a program called shining stars, which Patricia Bakwinya and a group of volunteers have set up on the edge of Francistown with some help from the U.S. Embassy. Most of the kids are orphans. The rest are what Bakwinya calls "vulnerable children."

Some of the vulnerable children are those children whose parents have tested positive, but they're still alive, and they want their children to be prepared for come what may. Every day, we have people bringing in children.

So when is your plan to have it available to mothers throughout the whole country?

We are working on a target of December 2001, and so far, we have covered seven districts out of 24 health districts, so we still have a long way to go.

Reporter: he said they also have a long way to go in getting women to agree to be tested. Did you decide to get tested for HIV/AIDS?

No, I didn't.

Reporter: why not?

I don't want to frustrate myself.

Reporter: you'd rather not know?

Yes.

Reporter: why?

If I know, I can kill myself, so I don't want to know.

Reporter: so even though it's possible that by not knowing, you're transmitting it to the baby, you still don't want to know?

No, I don't want.

Reporter: nearly all the women in the prenatal ward-- who asked us not to show their faces-- also refused to be tested. They said if a mother has HIV, a doctor will tell her not to breast-feed. Then families and neighbors will know she tested positive, and because HIV is stigmatized here, she could be rejected. To deal with these concerns, the government announced late last month that it will give an anti-transmission drug to all women to want it at the time they give birth, whether or not they've been tested. This means some women who don't have the disease may end up taking the drug, but the consensus was that the risks outweighed by the benefits. But these mothers raised still another concern. The drug is to save the baby, not the mother.

In asking myself why risk another is not protected. She's the one who is supposed to take care of that baby. What about if she dies?

It doesn't make much sense to save the baby and let the parents die.

Reporter: Patricia Bakwinya runs a volunteer organization that works with children of AIDS victims.

We used to depend on extended families, but now the extended families are overextended themselves. Some of the people, the relatives who are left with the children, are dying themselves. And finally, the whole family gets wiped out.

(Singing) 910

Reporter: these are some of those children. They sing, "my mother died before I could know her. My mother died before I could even see her face."

(Singing) 910

The kids are part of a program called shining stars, which Patricia Bakwinya and a group of volunteers have set up on the edge of Francistown with some help from the U.S. Embassy. Most of the kids are orphans. The rest are what Bakwinya calls "vulnerable children."

Some of the vulnerable children are those children whose parents have tested positive, but they're still alive, and they want their children to be prepared for come what may. Every day, we have people bringing in children.

America

Joie: that is this a real, I mean this is a real depiction based on what NASA picked up by your terra satellite right? in realtime

That is correct

Joie: over what amount of time does it take, though?

What we are seeing, these are data that we are were taken between march and december of last year. We put them together to make a coherent story.

Joie: gatcha

About 5beck -- degree by 5 degree resolution you can't see what -- smallest features there what you see fires in west of a aka major sources you can see, that gets caught in tropical east eirlays earned across Atlantic to South America.

Joie: red spots we've got questions for you, in our live web chat underway on web right now,

I think the correction probably has to come from us. By that I mean the peoples of the world. I think we are going to have to negotiate with each other, to clean up each of us (clean up the sources) because it we are in a global one world, and what's emitted in asia comes to us, while e-might goes to europe.

Joie, relatively quickly that another question from our web chat. ohn this is from josh, how does industrial pollution come tear to natural pollution like forest fires good point do they move as quickly are they as severe?

Industrial pollution, is about as about half of that be total amount of compared to natural sources. Industrial is half or more. From that.

And by a industrial, I ym am including manmade sources such as the fires that are especially tropics, to clear forest for agriculture.

We've got another live chat question from the web

I don't know the answer to that question.

Joie: can you balance it, I mean proportion easterly

We produce a considerable amount of pollution; I don't have those figures at my fingertips

Joie: you would say we are at high end of it I mean are we -- are we one of the world's great polluters, or are other nations

Sorry I can't hear I can't hear

Okay, unfortunately we appear to be having problems with our line to john gillee we appreciate him joining us with insight on that. And now let's take a look at the.

SEE AN ANIMATION THAT SHOWS where the world's air pollution is moving at today's first hot site, provided by NASA. You can get to that site by going to our site, at cnn.com/news/ste. Then click on the hot sites button.

**PRESIDENT BUSH CONTINUING** his visit to California, defended his environmental record today. Using the ancient trees of Sequoia National Park as a backdrop, the President promised to protect what he called "these works of god" for the ages. He announced measures aimed at preserving all of America's National Parks. President Bush today we must seek best ways to achieve the common goal leading to posterity a nation of fresh air, clean water and natural beauty. These policies arise from conviction a healthy environment is a national concern, and requires an active national government.

Joie: critics blasted Mr. Bush's national energy strategy in large part because of focus on developing new oil sources and more coal and nuclear power, as well.

**OFFICIALS IN CALIFORNIA ARE** hoping a new power-generating plant will help ease some of the power problems in the southern part of the state. The new plant is being pressed into service one year ahead of schedule. CNN national correspondent Frank Buckley joins us from Hemet in Riverside County, California, with more on the story. Frank, I wonder if you hear me sounds noisy in there.

It is very noisy. In here, this is the sound of electricity being generated at the water pumping station normally this is an area used for pumping water, today, four of the pumps have been converted into turbines to help generate electricity. let me show you exactly how that is being done if you go outside we can show you Diamond Valley Lake that is a manmade lake, 800,000 square feet acre of water that water, usually is pumped to that location, from the Colorado River aqueduct, that is how the water gets to this location, here. That water is usually pumped into the lake, and then that water is stored for future use. The process is being reversed today, the water coming back down from the reservoir, through these pumps which have been converted into turbines, and as that water passes through those turbines electricity is being generated. let me step outside, here now and show you where that water ends up as it passes through and underneath where we were just standing it comes outside here, into this holding area this reservoir, and from here, the water goes into the San Diego canal and goes on to some of the customers in Southern California who use it.

This is Phil Pace the chairman of the Metropolitan Water District Mr. Pace Tell us being generate herd at this pumping station.

Our initial program right now, that returned -- turned on four pumps converted generate 13 megawatts of power which is translates to enough power to accommodate 13,000 homes for one year. And that is what the initial program is.

FOOTNOTES

1602

And eventually you will have more pumps converted into turbines and 40,000 megawatts, correct?

That is 12 pump facility when we get on-line with all of them we will be able to generate enough power for 4,000 homes. And that in addition to our conservation programs and aqueduct that we entered into with State of California to shut off our pumping plants along Colorado River aqueduct when power is needed will generate about 150 megawatts of power from the state, that is quite a bit.

And you had to accelerate program or chose to accelerate program to convert pumps into turbines it supposed to take another year wasn't it?

Initially we planned to come on-line with the initial facility a year from this next summer, and, because of the power crisis, and all problems that we are having here in California, especially southern California we made a concerted effort to come on-line as quickly as possible and credit to our engineers to all our staff and our people, that we were able to accomplish this rather quickly.

All right Phil Pace chairman of board of the Metropolitan Water District Southern California thanks -- very much for joining us we appreciate it sir that is just one small part of the energy puzzle in southern California here, 40,000 megawatts not enough to power all of southern California of course, 34 million residents here in southern California but during peak demand days it could make a difference. Joe.

Joe Frank we've got a quick question from you since you are now able to hear us and on outside of the plant inside or inside quick question, from our web chat audience.

How much will it relieve the crisis you have to put it into perspective, and, at the immediate moment, we are talking about 13,000 homes, that is not a lot. In terms of as we saw in big picture with 34 million residents out, as the peak demand continues, on a very hot day in Southern California as the very candles that is amount of electricity surpluses that California harks each megawatt begins to count and, the point here, that is being made by the Metropolitan Water District is every single when matt counts as you get closer and closer to end of that reserve, and so 13 megawatts today, may not mean that much of a difference eventually when they bring 40 on, that could make a very big difference.

Joe Frank Buckley for us enjoying desert out there riverside county California thanks very much next hot site California energy soap opera get more about that, with help of this site. Main page of California Energy Commission. You can access that site by coming to our site at

enn.com new-site and clicking on the hot sites feature

**TOUGH WORDS TODAY FROM** Attorney General John Ashcroft to Oklahoma City bomber Timothy McVeigh. Ashcroft responded to McVeigh's attorneys' expected move to file a motion seeking to postpone the June 11th execution. In a statement, Ashcroft said Ashcroft has already postponed the execution date once to give McVeigh's lawyers time to review scores of FBI documents that were never turned over during the bombing trial.

**AN ALGERIAN MAN CONVICTED** in the U.S. Pentagon second highest state of alert -- Pentagon officials insist the higher alert status was not repeat nor related to the embassy bombings trial in New York, yesterday of course four men were convicted in 1998 bombings two of U.S. Embassies in East Africa defense attorneys began arguments today against impose the death penalty in the case, two of those convicted, could be sentenced to death.

**SPECIFICALLY FOUR MEN WERE** convicted co-conspirator with Osama Bin Laden to kill Americans, it is believed that Bin Laden is in Afghanistan. U.S. Government offered a five million dollar reward for information in a leads to his arrest today, a spokesman for the Taliban the mullah that controls most country said Washington has produced no evidence, linking Bin Laden to embassy boelt -- bombings that individual spoke via videophone to group of international journalists at CNN world report conference held here in Atlanta.

Osama Bin Laden is -- was creation of United States itself, people were unstigated to come to Afghanistan and fight soviet. In 1970s, 80s, and those people were called heroes. By your president like Mr. Ronald Reagan and Dick Cheney, they were called heroes up -- of independence because fighting their cause all of a sudden have turned into terrorists we don't know as to what is definition of terrorism in the United States. Because, how can the justify trying to kill man without even giving him a fair trial? How can you justify that the United States tried to kill Bin Laden without even telling us that he is a terrorist or he is akised of terrorism.

Joe, Osama Bin Laden is one of 13 men still wanted in the embassy bombing case. And Algerian man convicted in United States as -- of plotting terrorism reportedly told said the Los Angeles International Airport was to have been a target. "The Los Angeles Times" says Ahmed Ressam had planned to place a large bomb at the airport.

McGraw, along with other big names like Britney Spears and N'Sync on board to record prayers for a spoken word CD, which will accompany the Pontiff's next book project. "The private prayer books of Pope John Paul II" will be released in November

#### YOU DON'T HAVE TO WAIT UNTIL

November to have a religious experience at the record store. Christian musicians are selling millions of albums to an ever-growing congregation of fans, and as CNN's Bill Tush reports, whether they prefer light pop or heavy metal, more and more music fans are finding religion.

#### NO LONGER IS CHRISTIAN MUSIC

something you hear coming from a revival tent, and it's not hallelujahs and amens either. It's Christian music with a beat, like hip-hop of the Surptones, or rock influenced like the girl group Point of Grace.

It's broken into different genres. You've got Christian rap. You've got Christian pop, which is what we are. You got gospel. So many different things to choose from.

On Christian music charts, point of grace can rival any pop group, with 21 number-one singles, grammy nominations, and enough awards to fill a trophy room, much of it due to more and more radio play.

Especially now, even with like satellite There's satellite signals, so they can touch more. Christian tour dates are on the rise. The Australian-born duos boys headline the festival conducts.

It's the first ever multicity traveling. It's a portable amphitheater. It holds 6,000 to 10,000 people. And it's the first ever music and extreme sports festival. So we've got, you know, 10 bands playing. At the same time, you've got these guys jumping these motocross bikes.

And when Carmen, the superstar in the field, set up a concert on the beach for spring break, thousands came, even though MTV and "Playboy" were right next to them. Christian music legend Michael W. Smith has sold millions of records on his label dedicated to the genre. And these guys opened for Billy Graham. A lot of people would think, how can this fit in rock music? how can you guys get that crowd jumping up and down and thrashing around, and then you sing about god? This is just — this is weird. But, it's just — it's the way that we communicate though the kids.

Their latest single, "escape from reason," has just been added to the mtv-to-play list. And what's the message?

Just purely the message of the Gospel and Jesus.

And it doesn't mean that you can't join the

band for the same reason most guys do.

A lot of musicians go out there and it's like, I want the money, I want the fame, I want to be on this TV show and the cover of this magazine, and those aren't bad things. But with us, it's all about hoping that the people who come to our shows walk out of there with changed lives.

Bill Tush, CNN Entertainment News, New York

**AMEN, IF YOU'VE BEEN PRAYING** for more news on your favorite stars, we just might have the answer. **The Newshour, (PBS, Channel 233)**  
**Start Time: 6:01pm - Record Time: 00:54:49min**  
**June 5, 2001**

The comeback of Silvio Berlusconi in Italy. It all follows our summary of the news this Tuesday. Major funding for the Newshour with Jim Lehrer has been provided by... imagine a world where we're not diminishing resources; we're growing them. Ethanol, a cleaner burning fuel made from corn. A D.M., the nature of what's to come. And by the Corporation for Public Broadcasting. This program was also made possible by contributions to your PBS station from viewers like you. Thank you.

Lehrer: the Federal Reserve cut a key interest rate again today. Its open market committee lowered the federal funds rate half a point to 4%-- the lowest in seven years. Banks charge that rate on overnight loans to each other. It was the fifth reduction this year. In a statement, the Fed said it still saw weakness in the economy leaving open the possibility it might cut rates again. House Democrats today announced their alternative to President Bush's energy plan. They gathered at a gas station near the Capitol, and said they'd increase production and reduce demand. They called for federal caps on electricity prices, restrictions on drilling in federal lands, and tax incentives for energy-efficient cars and homes. House minority leader Gephardt said it was a balanced approach.

We believe we can have more than adequate supplies of energy and save our environment at the same time if we do the right things in research on renewables, on conservation, and on new sources of energy in high technology. We do not accept the belief that this administration apparently has that we have to drill our way out of this problem.

Lehrer: President Bush is to announce his plan on Thursday. It's expected to put greater emphasis on finding more energy and building more production capacity, plus taking a new look at nuclear power. He has opposed price controls.

A runaway freight train rolled across northwest Ohio for nearly an hour today. It was unmanned as it crossed at least two counties and downtown Bowling Green at speeds of up to 45 miles per hour. Police said the southbound C.S.X. train got away while the engineer was operating a switch at a stop near Toledo. It finally slowed, and a company official managed to climb on and stop it, about 55 miles from Columbus. C.S.X. said the cargo aboard the 47-car train included a non-explosive industrial acid. No one was injured.

In the middle east today, thousands of

Palestinians protested the anniversary of Israel's founding in 1948, and fierce fighting erupted across the West Bank and Gaza. We have a report from Louise Bates of Associated Press television news.

Reporter: more than 30,000 Palestinians marched on the main square of the west bank town of Nablus in the largest demonstration against Israel seen for several years. The event was organized to mark "AlNagba," meaning "The Great Catastrophe." That's the name Palestinians give the anniversary of the creation of the state of Israel in 1948. (Gunfire) Many of the demonstrators headed to Israeli check points after the rallies. When an Israeli soldier removed a Palestinian flag, he was jeered by the angry crowd. At a traffic circle near Ramallah, a regular flashpoint during the Intifada, clashes with Israeli soldiers turned violent. Across the west bank and Gaza, four Palestinians were killed and more than a hundred were injured. (Gunfire)

Lehrer: since that report was filed, Palestinian doctors put the number of wounded at more than 200, and the Israeli military said an Israeli woman was killed in the west bank after nightfall. In Jerusalem today, a Palestinian bus driver was convicted of murdering eight Israelis last February. He drove his bus into a crowd near Tel Aviv. It was the single deadliest incident since the current violence began last September.

Back in this country today, more aggressive treatment of high cholesterol was proposed today by a federal medical panel. It had been convened by the National Institutes of Health. The group of experts said the change could triple the number of people who take cholesterol-lowering drugs and dramatically reduce deaths from heart disease. But they said doctors need to make it a higher priority.

There is a clear undertreatment of people who need cholesterol lowering. That is a chronic problem. We have put out guidelines and information and said that this deserves aggressive attention, and we have to do more to make it easy to implement all of these guidelines, and make it possible to apply them in actual practice.

Lehrer: it's estimated more than 50 million Americans have high cholesterol. The new guidelines recommend different tests to screen for the problem. They also revise the recommended levels for good and bad cholesterol. We'll have more on this story later in the program tonight. Married couples with

## Hardball (CNBC, Channel 356)

Recording Time: 5:00pm -Total Time: 00:59:59 min  
September 14, 2001

One week has passed since terrorist attacks destroyed the World Trade Center and damaged the Pentagon and hope for finding survivors in the rubble is fading fast. Tonight, the latest on the investigation and plans for a possible retaliation. I'm Chris Matthews. Welcome to a special edit on of "Hardball" Captioning by the national captioning institute - www.ncicap.org.

5,422 people are still missing in the rubble of the World Trade Center and New York Mayor Rudy Giuliani doesn't expect anymore survivors.

The chances of recovering any live human beings are very, very small now. Given the amount of time and the condition of the site. Those chances are not totally, however, ended or over so, we will - we will still conduct ourselves as a rescue effort as well as a recovery effort.

Today, the nation stopped at 8:48 this morning, the time the first plane hit to mark the tragic events of one week ago. [sirens]

At the White House, President Bush pressed forward, vowing to extinguish terrorism and hailing the American people.

Today, I herald the soul and spirit of America with live examples of people who've made a huge difference and those who suffer and those who hurt. This is a great land. It's a great land, because our people are so decent and strong and compassionate.

Meanwhile, Attorney General John Ashcroft says other hijackers could still be at large. So far, at least, 75 people have been detained and questioned about the attacks and four arrested on material warrants. Among those detain reasonable doubt two men who were carrying box cutters and large amounts of cash who were pulled off a train in Texas. And a man detained in Minnesota prior to the attack who aroused suspicion for trying to buy time on a jet simulator, despite a lack of flight experience. In Afghanistan, refugees continue to pour out of the country, expecting a U.S. attack. Afghanistan's ruling Taliban says it hasn't ruled out the possibility that Osama bin Laden was behind last week's attacks. But it wants proof before it hands over bin Laden. Even so, Defense Secretary Donald Rumsfeld says the surrender may not matter much.

Our adversaries are not one or two terrorist leaders, even a single terrorist organization or network. It's a broad network of individuals and organizations that are determined to terrorize and, in so doing, to deny us the very essence of

what we are - free people

This hour, we're going to get reactor from former Senator Warren Rudman, plus we'll go over the military game plan with Barry Mcafferree and Alexander Haig. And talk to Donald Marry run on how President Bush is handling this crisis and we begin this hour at ground zero with NBC's Chip Reid. Horrible news today, right?

Well, absolutely, Chris. This is the sixth day in a row that they have not pull add single live person out of that rubble. You can see over my shoulder it is still burning actively. The smoke is pouring out of there. The conditions for the rescue worker are still horrendous and they are now going through an agonizing process, officials are, at trying to decide at what point do you just decide this is no longer a rescue effort where you're looking for people alive and it becomes a recovery effort where you're simply looking for bodies? Some officials think it's better to declare, at some point, it's over. So think it's better to just let the families come to that conclusion on their own. Rudy Giuliani today said that there is a very, very small chance of finding people alive in there. At the same time, he said there is still a rescue effort. He does not want to squash hope completely, but on the other hand, he want it is families to come to the conclusion that the chances of finding their loved ones in there alive are very, very slim indeed. One other point they made today, Rudy Giuliani and other officials said, they're pleading with the public not to come down here because they have been coming down in droves to take pictures, see the site. Maybe it is part of the mourning or grieving process for people generally, but it is interfering with the part of the rescue workers in there. They want this site to be kept open so that the vehicles carrying bodies and equipment in and out will not be impeded by people down here taking picture. Chris?

Thank you very much, NBC's Chip Reid at ground zero. For the latest on the plans of a possible military striking, we get this report from NBC's Jim Miklaszewski at the Pentagon.

U.S. Marines dressed for combat leave their base in Okinawa today. The Army's 82nd Airborne at Fort Bragg, North Carolina. They play a major role in any U.S. invasion of Afghanistan.

They're waiting for a call to arms. And they're ready to go and answer it.

Donald Rumsfeld says when it comes to America's self-defense, all options are on the
